SUMMARY

Backend platform engineer with 10 years of experience building systems at scale. Architected a CPaaS billing platform handling 1B txns/day at 10K RPS; consolidated a 20-service data pipeline into 5 components; delivered a zero-downtime platform-wide SSO with zero production disruption.

TECHNICAL SKILLS

Core Stack: Go, JavaScript, SQL, gRPC, Node.js, ReactJS

Tools & Platforms: Kubernetes, Docker, AWS, Kafka, PostgreSQL, MongoDB, Redis, RabbitMQ, Grafana

EXPERIENCE

Infoblox

Sept 2024 – Present

Senior Software Engineer | Data Engineering

Bangalore, India

- Redesigned the Cloud Data Connector platform from 20 microservices into 5 components. Removed duplicate code across repos and fixed package versioning, saving days of work per release.
- Caught a Kafka topic-explosion risk before it shipped. Designed a per-customer keyed partition topology and got cross-team buy-in; projected topic count dropped 100x (1M → 10K).
- Rebuilt Grafana observability and alerting from scratch across 5 services. MTTD on customer-impacting incidents went from ~4 hrs to 20 min. SLO dashboards and on-call runbooks became the team standard.
- Built 3 internal LLM agents (PR review, deploy automation, sprint retros). Other teams picked them up. Manual-misconfig deploy failures went to 0 within 3 months.

Kaleyra (Tata Communications)

Apr 2021 – Sept 2024

Associate Software Architect | Billing, SSO, Chat Platform

Bangalore, India

- Designed and delivered the CPaaS billing platform end-to-end at 10K RPS and ~1B transactions/day; led a team of 3 engineers across architecture, task breakdown, reviews, and release.
- Cut billing latency 60% and infra cost 30% by redesigning the service architecture and data flows. Compute footprint dropped 10x after moving to gRPC and batching high-frequency transactions.
- Fixed recurring MongoDB file-descriptor outages (2–3/month at peak) across 10 services by moving 100K+ collections into a tier-based pool. Coordinated with 4 teams and validated the design with MongoDB consultants. The new layout opened up a premium tier: faster reports, longer retention.
- Replaced a 3-department recursive approval chain with a single-step company admin SSO.
- Rewrote the WhatsApp Web-style chat platform from scratch in Go and moved storage from SQL to MongoDB.
- Migrated the legacy PHP billing service to Go and the admin portals to Node.js. Page load times improved 80–90%.

Deloitte

Mar 2020 – Apr 2021

Solution Advisor | Blockchain & Digital Assets

Hyderabad, India

- Built a multi-chain blockchain auditing tool covering 14 cryptocurrencies (Bitcoin, Ethereum, Ripple, Polkadot, and others), plus a Rosetta API integration for Celo.

MSR Cosmos

Aug 2018 – Mar 2020

Software Engineer | Blockchain

Hyderabad, India

- Built the interface layer for the Blockchain-as-a-Service platform, wiring the infrastructure and frontend together so the platform could talk to the Blockchain networks (Ethereum and Hyperledger Fabric).

Infosys

Jun 2016 – Aug 2018

System Engineer | Blockchain R&D

Bangalore, India

- Built blockchain PoCs on Ethereum and Hyperledger Fabric; migrated SharePoint 2010 to 2013 on Azure.

PROJECTS

Munshiji | munshiji.xyz

- Open-source, self-hosted personal finance dashboard built for India. First-class support for EPF, NPS, PPF, SSY, and 13+ Indian account types that global tools don't model.

Writing & Speaking | *freeCodeCamp*, *Towards Data Science*, *DigitalOcean*, *schadokar.dev*

- Author of *Playtime with Hyperledger Composer* (eBook)
- Speaker at London Gophers, Pune Gophers, and DockerCon on Go, distributed systems, and container tooling.

EDUCATION

Jabalpur Engineering College

Bachelor of Engineering, Electronics and Telecommunication

Jabalpur, MP

Aug. 2012 – May 2016
