Summary

Backend platform engineer with 10 years of experience building cloud-native microservices at scale. Architected a CPaaS billing platform handling 1B txns/day at 10K RPS; consolidated a 20-service data pipeline into 5 components; delivered a zero-downtime platform-wide SSO with zero production disruption. Strong in Go, Cloud-Native Architecture, event-driven architecture, and observability, with technical leadership, mentoring, and hands-on coding experience aligning cross-functional teams and stakeholders around system design and high-quality coding.

Technical Skills

Core Stack: Golang, JavaScript, SQL, gRPC, Node.js, ReactJS

Tools & Platforms: Kubernetes, Docker, AWS, Kafka, PostgreSQL, MongoDB, Redis, RabbitMQ, Grafana

Experience

Infoblox

Sept 2024 – May 2026

Senior Software Engineer | Data Engineering

Bangalore, India

- Redesigned the Cloud Data Connector platform from 20 microservices into 5 components. Removed duplicate code across repos and fixed package versioning, saving days of work per release.
- Caught a Kafka topic-explosion risk before it shipped. Designed a per-customer keyed partition topology and got cross-team buy-in; projected topic count dropped 100x (1M → 10K).
- Rebuilt Grafana observability and alerting from scratch across 5 services. MTTR on customer-impacting incidents went from ~4 hrs to 20 min. SLO dashboards and on-call runbooks became the team standard.
- Built 3 internal LLM agents covering PR review, deploy automation, and Agile sprint retros. Other teams picked them up. Manual-misconfig deploy failures went to 0 within 3 months.

Kaleyra (Tata Communications)

Apr 2021 – Sept 2024

Lead Software Engineer | Billing, SSO, Chat Platform

Bangalore, India

- Designed and delivered the CPaaS billing platform end-to-end at 10K RPS and ~1B transactions/day; led a team of 3 engineers across architecture, task breakdown, reviews, and release.
- Cut billing latency 60% and infra cost 30% by redesigning the service architecture and data flows. Compute footprint dropped 10x after moving to gRPC and batching high-frequency transactions.
- Fixed recurring MongoDB file-descriptor outages (2–3/month at peak) across 10 services by moving 100K+ collections into a tier-based pool. Coordinated with 4 teams and validated the design with MongoDB consultants. The new layout opened up a premium tier: faster reports, longer retention.
- Replaced a 3-department recursive approval chain with a single-step company admin SSO using Keycloak.
- Rewrote the WhatsApp Web-style chat platform from scratch in Go and moved storage from SQL to MongoDB.
- Migrated the legacy PHP billing service to Go and the admin portals to Node.js. Page load times improved 80–90%.

Early Career – Infosys, MSR Cosmos, Deloitte

Jun 2016 – Apr 2021

Software Engineer | Distributed Systems

India

- Built the interface layer for a BaaS platform on AWS – unified Node.js API over Ethereum and Hyperledger Fabric, abstracting divergent network protocols with automated deployment pipelines.
- Built a multi-network transaction aggregation service normalizing data across 14 independent blockchain APIs (Deloitte).

Projects

Munshiji | munshiji.xyz

- Open-source, self-hosted personal finance dashboard built for India. First-class support for EPF, NPS, PPF, SSY, and 13+ Indian account types that global tools don't model.

Writing & Speaking | freeCodeCamp, [Towards Data Science](https://TowardsDataScience), DigitalOcean, schadokar.dev

- Author of *Playtime with Hyperledger Composer* (eBook)
- Speaker at London Gophers, Pune Gophers, and DockerCon on Go, distributed systems, and container tooling.

Education

Jabalpur Engineering College

Jabalpur, MP

Bachelor of Engineering, Electronics and Telecommunication

Aug. 2012 – May 2016
